

100% RECYCLING & QUALITY

The polyamide in the **mare blu** outer fabric is produced in a special recycling process. Polyamide waste is regenerated in a closed production cycle and made into new raw materials again. This is done in 6 process steps:

- 1 Polyamide waste in the form of trawl nets, amongst other things, is collected from different organizations all over the world.
- 2 The different types of waste are prepared for regeneration in a processing plant where they are cleaned, crushed and compressed.
- 3 A depolymerisation process recovers the raw material caprolactam that is completely free of all foreign matter. The chemical properties and performance are completely the same as the caprolactam that is produced from crude oil, a valuable resource.
- 4 The subsequent polymerisation, i.e. the process to convert the regenerated raw material into polyamide, is therefore identical to the conventional method. Nevertheless the manufacturing process deserves special attention because it saves energy, water and residual waste.
- 5 The high-quality polyamide is then processed into textile yarns to produce **mare blu** swimwear, amongst other things.
- 6 The manufacture takes place in our own production.

The topic of sustainability and in particular the protection of the environment and the conservation of resources has always been a focus of the fashy corporate philosophy. We are pleased to be able to introduce **mare blu**, the fashy swimwear to be made from 100 % recycled polyamide.

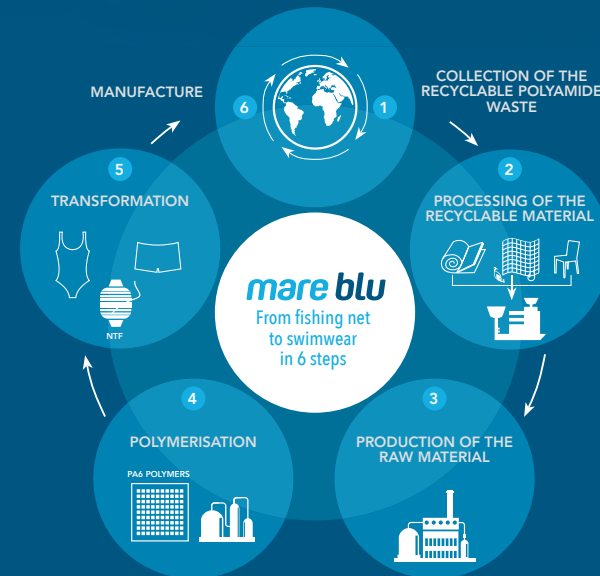

Trawl netting and plastic waste, amongst other things, are collected from the oceans for the recycling. We are therefore making an important contribution to the active environment as well as nature conservation and are preserving valuable resources.

The practical advantages of the special **mare blu** fabrics are also impressive. An elastane content of 22 %-Lycra XTRA Life and the very fine mesh give it a soft feel and make it comfortable to wear.

Its perfect shape-retaining fit and exceptional resistance to sun cream and oils will also amaze you.

By purchasing this product you are making a personal contribution to the conservation of the natural habitat of marine life.

fashy says thank you.

SWIMWEAR MADE FROM FISHING NETS
